

Demo Memos 1.1

Find the part. Loop it. Keep it.

Loop and Trim arrive, silence trims
itself, and tidying up takes one swipe.

Version 1.1 (3) · 11 October 2026

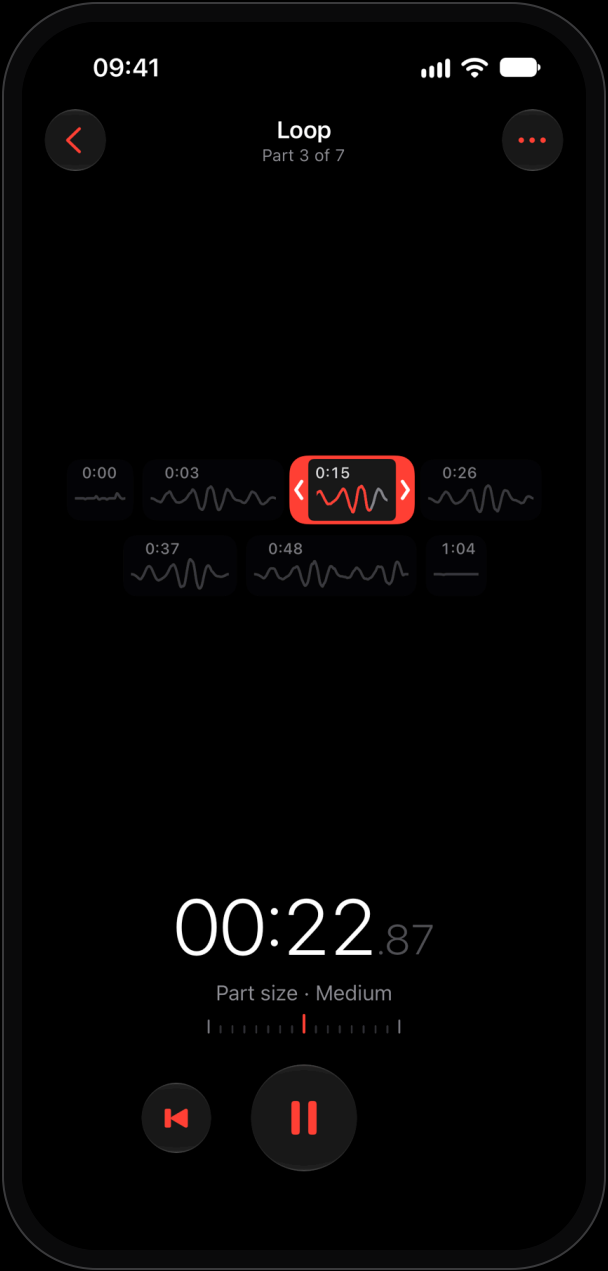

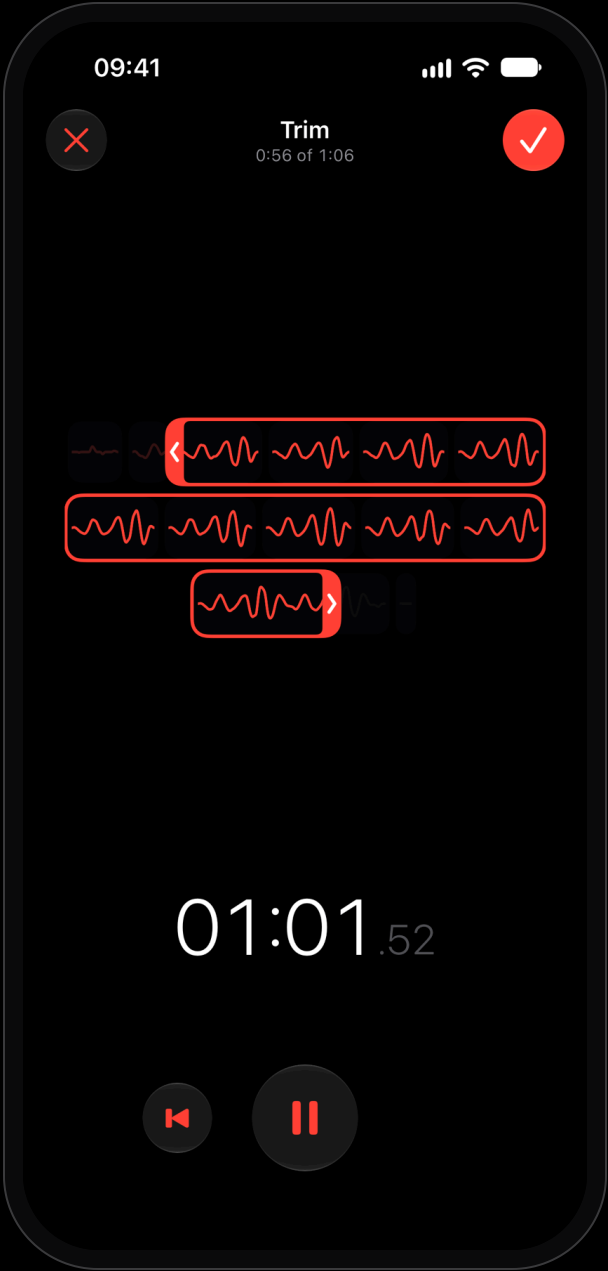

Loop

Practise the part that matters.

Your take, laid out as the parts of the song. **Tap one and it repeats.** Drag either end to take in its neighbours. No gap at the join.

- ... then Loop
- Short, Medium or Longer parts
- Needs iOS 27

Trim

Keep what's worth keeping.

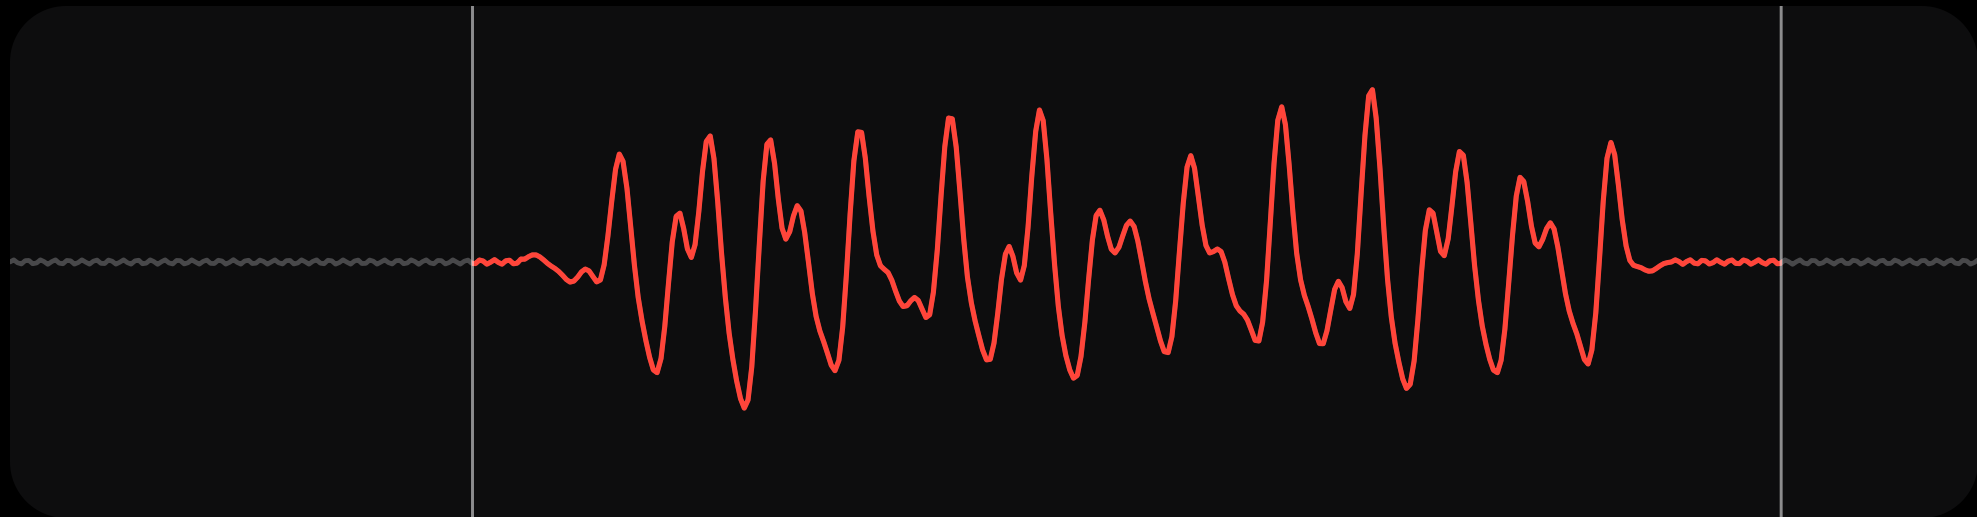

Two red tabs, the whole take. **Hold a tab to hear exactly where the edge falls.** Then trim the demo, or save that range as a demo of its own.

- ... then Trim
- Trim Demo
- Save as New Demo

Auto trim

The silence comes off by itself.

The tap, the phone going down, the breath before you play. A new demo is saved without them.

Starts **0.5 s** before your first sound

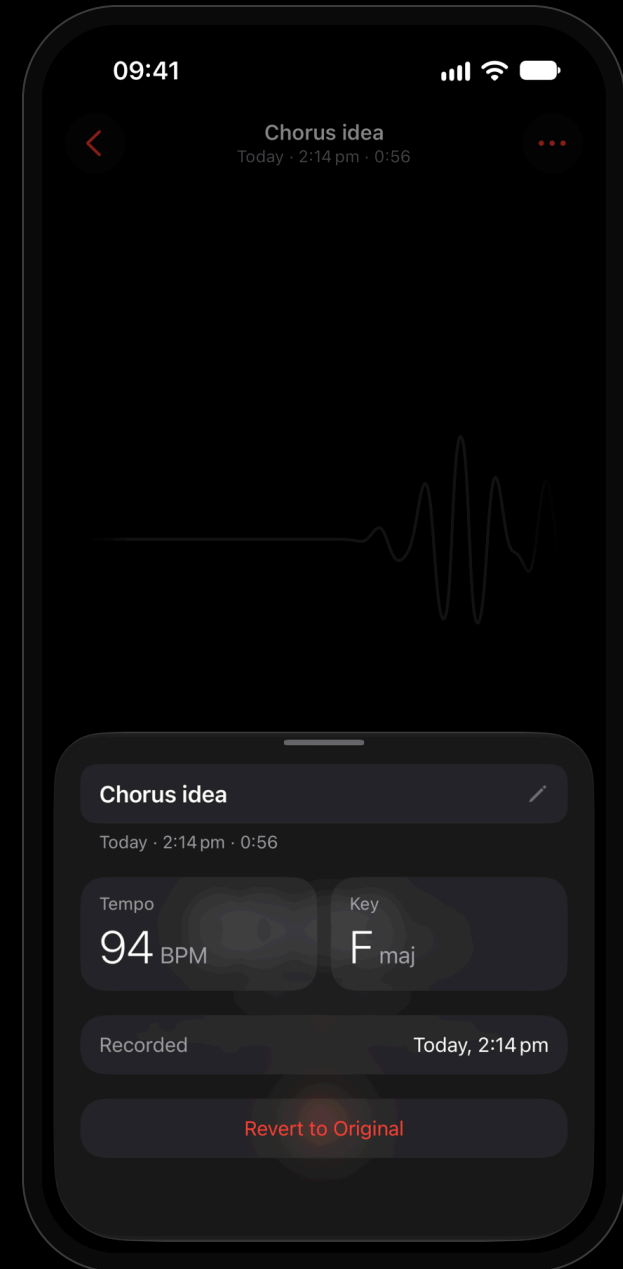

Count-ins and quiet intros stay

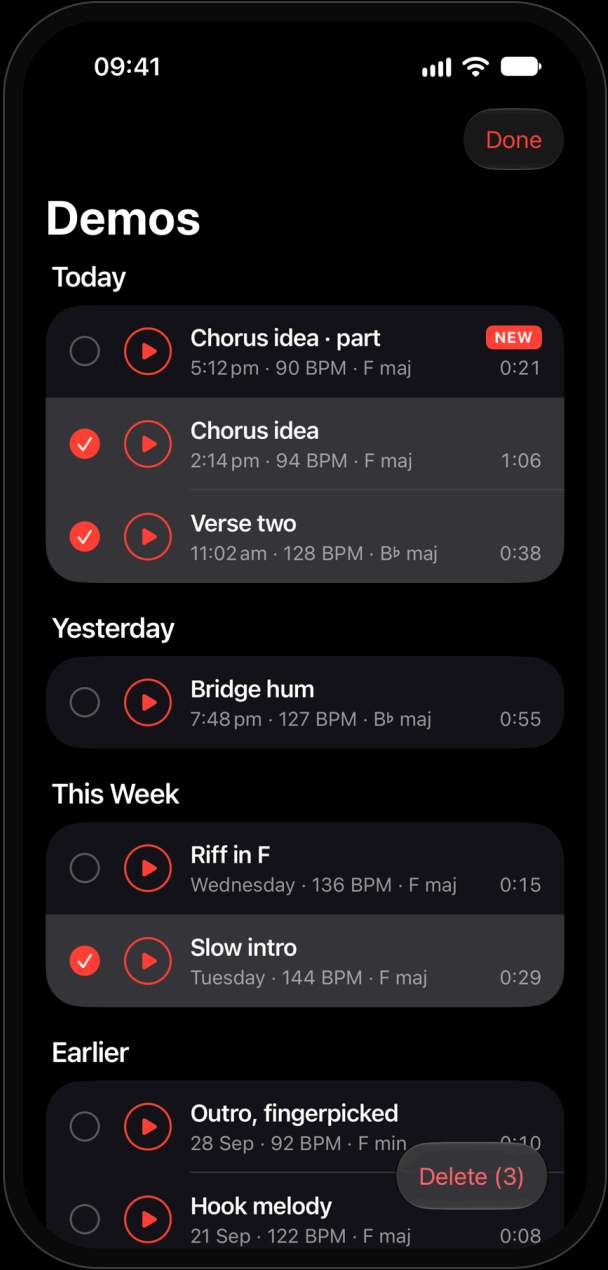

Ends **1.5 s** after your last

Always undoable

Nothing is ever cut.

Trim and auto trim only choose what plays. The whole recording stays on your phone. Tap a demo's title, then Revert to Original.

Select

Two fingers. Tidy list.

Swipe down the list with two fingers to pick as you go. Tap to add or drop a row. Play still works, so you can hear a take before it goes.

Two-finger swipe or tap

Delete asks first

And the small things.

Loop

Trim

Saved parts arrive marked.

Save a range from Loop or Trim and you land on the list, at the top, with the new demo badged until you play it.

One button, three jobs.

Share has moved into ... on the Take screen, above Loop and Trim.

Rename in one go.

Tap the name and all of it is selected. Start typing and "New Demo 12" is gone.

Feel each part's edge.

A light tick as your drag crosses from one part to the next in Loop and Trim.

Look in without stopping.

Open the demo that's playing, go back, and the list plays on.

Fixed.

The screen stays on while you record.

Auto-Lock used to turn it off mid-take, and you had to unlock the phone to reach Stop.

No more ✕ that closed the sheet mid-rename.

It looked like "clear text". It's gone. Swipe down or tap outside to close, and the name is kept.

The Take screen rests when nothing plays.

It was redrawing itself 25 times a second while idle. Now it only draws when something changes.

Screens are captured from this build in the iOS Simulator; the demo names are examples. The auto trim figure is an illustration.
