

Demo Memo 1.2

# Gather your ideas. Keep every one.

Playlists with covers drawn from your  
takes, a week to change your mind, and  
recordings from other apps brought in.

Version 1.2 (4) · 18 October 2026

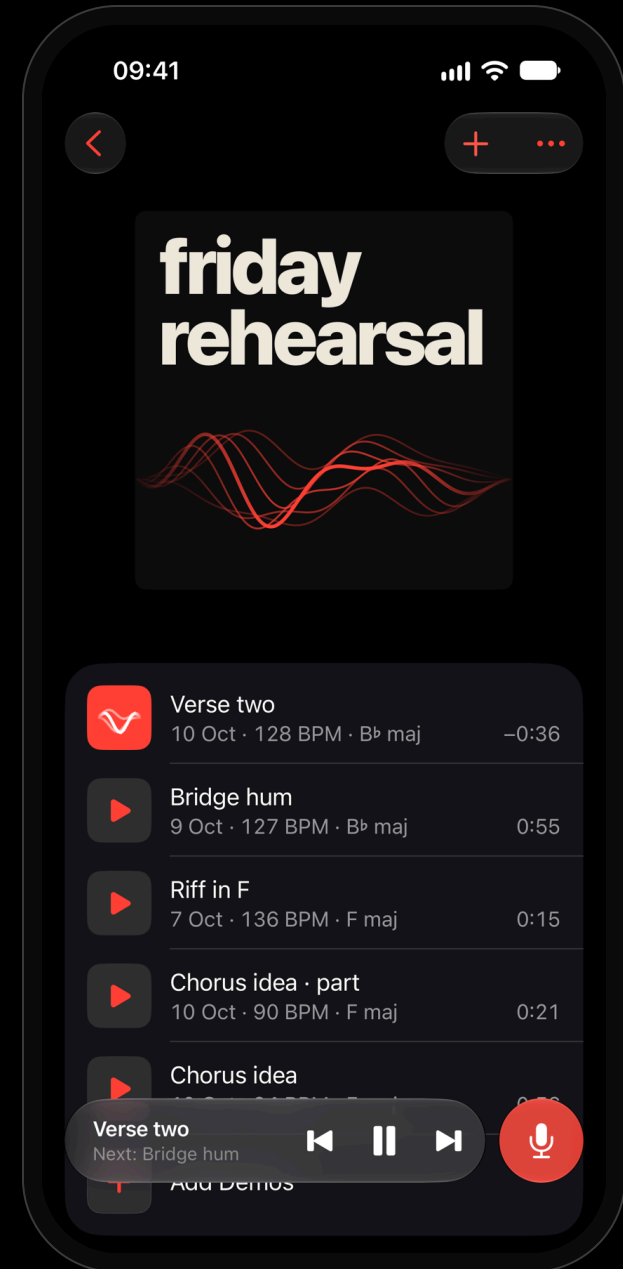

## Playlists

# Put your ideas in order.

Make a playlist and add to it from anywhere: a row's swipe, the Take screen's ..., or a two-finger selection. **Press Play on any row** and it plays on through the playlist, in your order. New Demo on a playlist records straight into it.

Demos then +

Reorder in **Edit Playlist**

## Covers

# Every playlist gets its own cover.

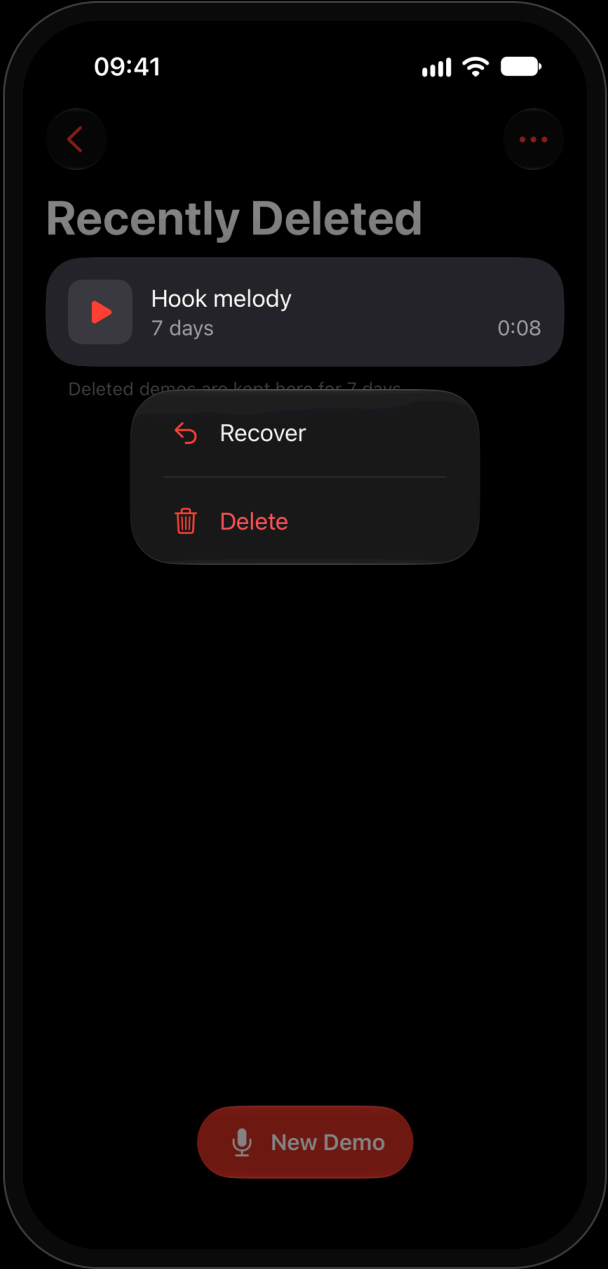

Twenty-three covers drawn from the same red strands as your takes, or **a photo of your own**, cropped square in one of fourteen looks. The name always fits.

... then **Edit Info**

**23** covers to choose from

Or a photo, in **14** looks

Recently Deleted

# A week to change your mind.

A deleted demo waits in **Recently Deleted**, on the Demos screen, for seven days. **Hold it or swipe it to Recover**, and it goes back where it was. Deleting from there is for good, so that asks first.

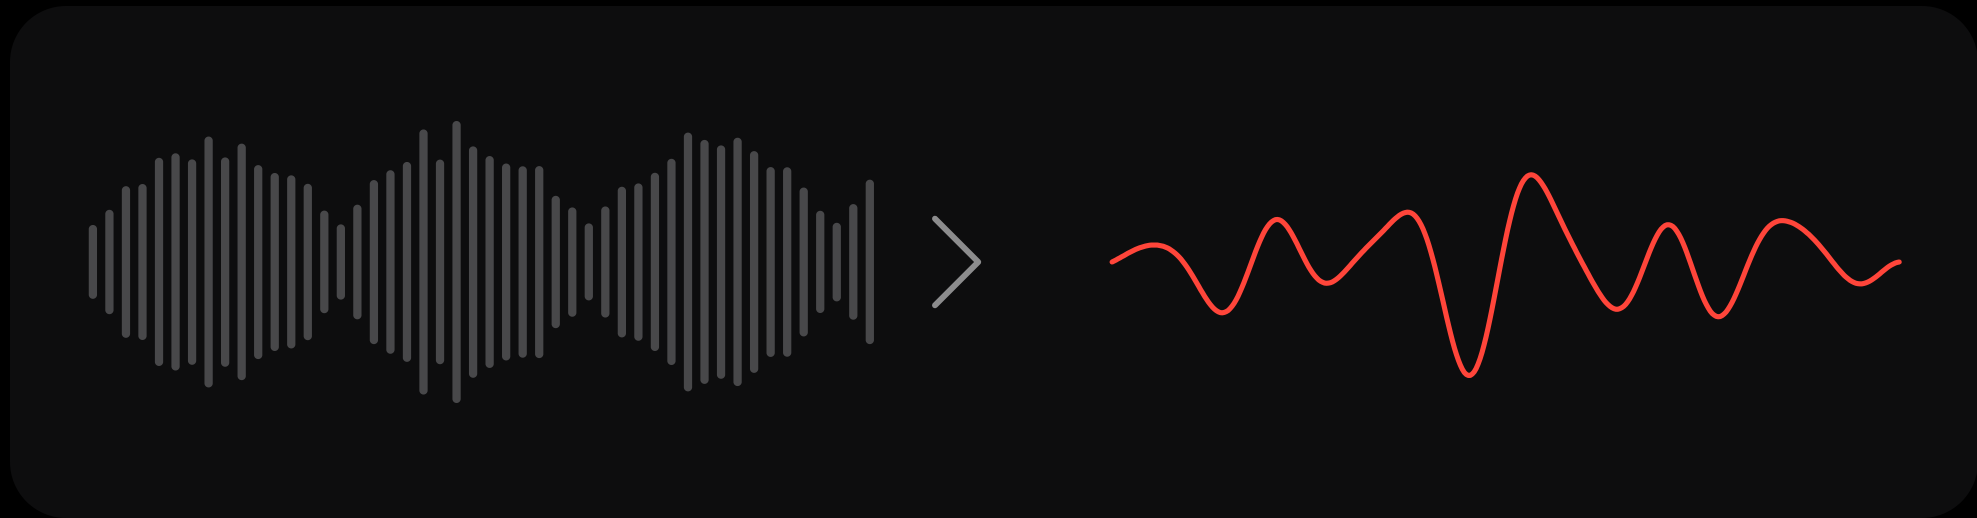

Kept for 7 days

Recover or Delete

Import

# Bring your recordings in.

In Voice Memos, Messages or Files, **share a recording to Demo Memo**. It lands at the top of All Demos, marked NEW, named after the file, with its silence trimmed off like a new take.

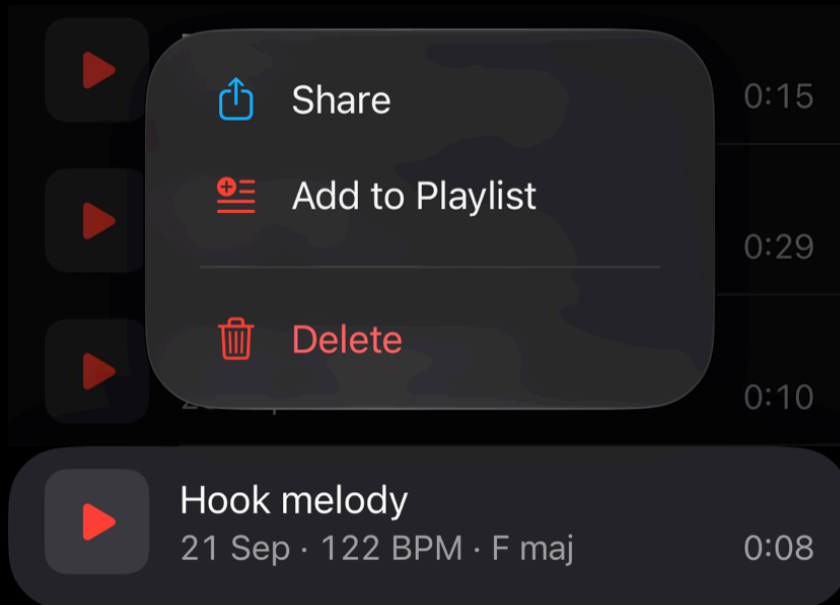

Share, then **Demo Memo**

Kept in the app's own format

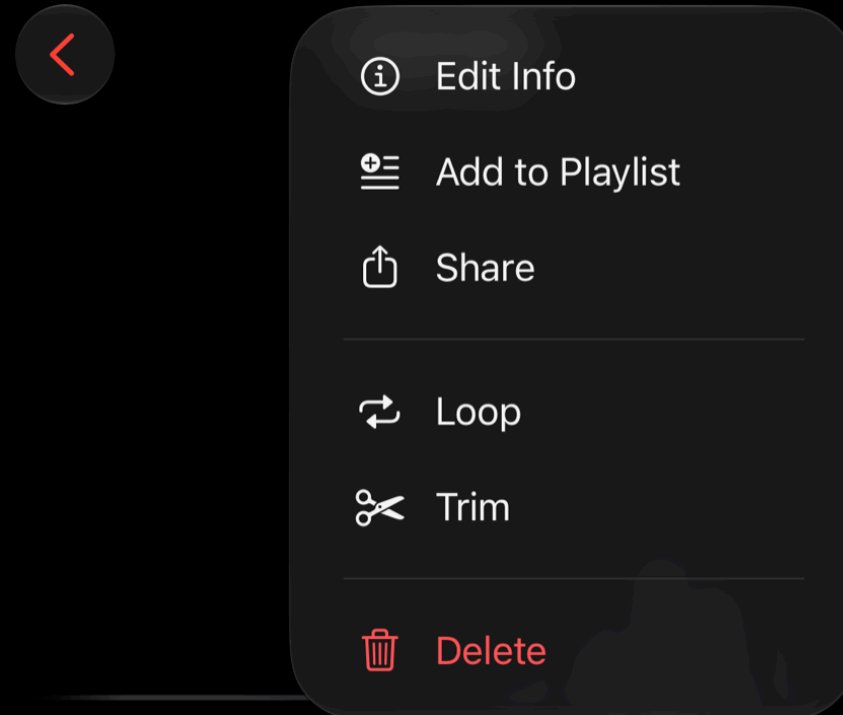

One file at a time

# And the small things.

## Hold a row for its actions.

Press and hold any row for what its swipe does: Share, Add to Playlist or Delete.

## Delete from the Take screen.

... then Delete. You're back on the list in time to see the row go.

### Now called Demo Memo.

A new name on your home screen. "New Demo Memo" starts a take from Siri, and the old phrase still works.

### Playback follows you.

Start a demo on one list and move about the app. The bar stays at the bottom of every list.

### Fewer questions.

Only a delete you can't undo asks first. Deleting several demos goes to Recently Deleted, like a swipe.

## Fixed.

### Share works at any sample rate.

A take recorded through an interface at 88.2 or 96 kHz is now shared at 48 kHz. It used to fail with a share error.

### Start over can't cost you a demo.

If the microphone went during Start over's count-in, your next take could replace the demo you meant to keep. Now the demo is given back.

### Larger text reaches further.

Recording Tips, the Save as New Demo message and Loop's labels follow your text size, and onboarding scrolls at the largest sizes.

Screens are captured from this build in the iOS Simulator; the demo and playlist names are examples. The covers figure shows three of the app's sleeves, and the import figure is an illustration.
